All cases are totaled by event date and were living in Clark County at diagnosis. Event date is the earliest date among diagnosis date, illness onset date, date reported, and specimen collection date, except for congenital syphilis and COVID-19. If classified as congenital syphilis, the event date is determined based on the reporting dates to either the local health department or the Ohio Department of Health, whichever is earliest. If classified as a COVID-19, the event date is calculated based on specimen collection date, specimen received date, or specimen test result date, whichever is earliest. Data for all cases except COVID-19-associated hospitalizations and RSV-associated hospitalizations* were retrieved from ODRS on 10/7/2026.*

*On 10/1/2025, COVID-19-associated hospitalizations and RSV associated hospitalizations were added to communicable disease reporting in Ohio. Additionally, COVID-19 was removed as a reportable condition. Data for COVID-19 and RSV-associated hospitalizations were gathered from ODH REDCap on 10/7/2026 with the facility admission date acting as the event date.

HIV (New Diagnoses)	2026*		2025

**Notes about HIV Data: The above data were collected from the Ohio Disease Reporting System (ODRS). HIV cases are reviewed by ODH and case dispositions are subject to change in this report. All HIV data for 2026 is preliminary and should not be used for comparison to previous years, program planning, or trend analysis. Final HIV data are gathered from the enhanced HIV/AIDS Reporting System (eHars) and reported in the ODH HIV Surveillance Report. Cases reported above were residents of Clark County at the time of diagnosis and dispositioned as either a) Previous Negative, New Positive, or b) Not Previously Tested, New Positive for patients recently diagnosed with HIV.*
