

HOMICIDE DEATHS: CLARK COUNTY 2012-2020

All the data was queried from the Ohio Department of Health Public Health Information Warehouse. The Ohio Department of Health specifically disclaims responsibility for any analysis, interpretations, or conclusions.

OVERVIEW

From 2012-2020, there were a total of 81 deaths that were ruled a Homicide.

The trend of homicide deaths is increasing from 2012 through 2020 (Figure 1).

Most of the homicide deaths from 2012-2020 were due to firearms (80.2%). Blunt force trauma accounted for 9.9% of homicide deaths from 2012-2020 followed by cut or pierced (6.2%) deaths (Figure 2). In 2020 alone, firearms accounted for the majority (75.0%) of homicides followed by blunt force trauma (16.7%) (Figure 2).

Overall, the age group that was involved the most with homicide deaths was the 25-34 year old (27.2%) age group. Those involved with a homicide death that involved firearms, had the most deaths in both the 15-24 year old and 25-34 year old (30.8%) age groups. The age group involved in cut or pierced homicides with the most deaths was the 25-34 age group (40.0%). Blunt force trauma homicides involved both the <1-4 year old and 35-44 year old (25.0%) age groups the most (Figure 3).
