Unless otherwise specified, all cases are totaled by event date, <sup>†</sup>HIV data were collected from ODRS and not from ODH HIV Surveillance.

**Notes for BOH:**

1. There has been an increase in Strep Group A-invasive infections. This is consistent with state and national trends.

Figure 1 shows the trend from 2015-2023 of Invasive Group A Strep in Ohio.

2. Clark County had its first *Candida auris* case in March. This healthcare associated infection has been of emerging concern in the state and nation in recent years. It is a multi-drug resistant fungal infection. In 2022, there were 79 cases of *C. auris* statewide, and cases have been increasing since Ohio's first case in 2020. See attached CDC fact sheet for more information on *C. auris*.

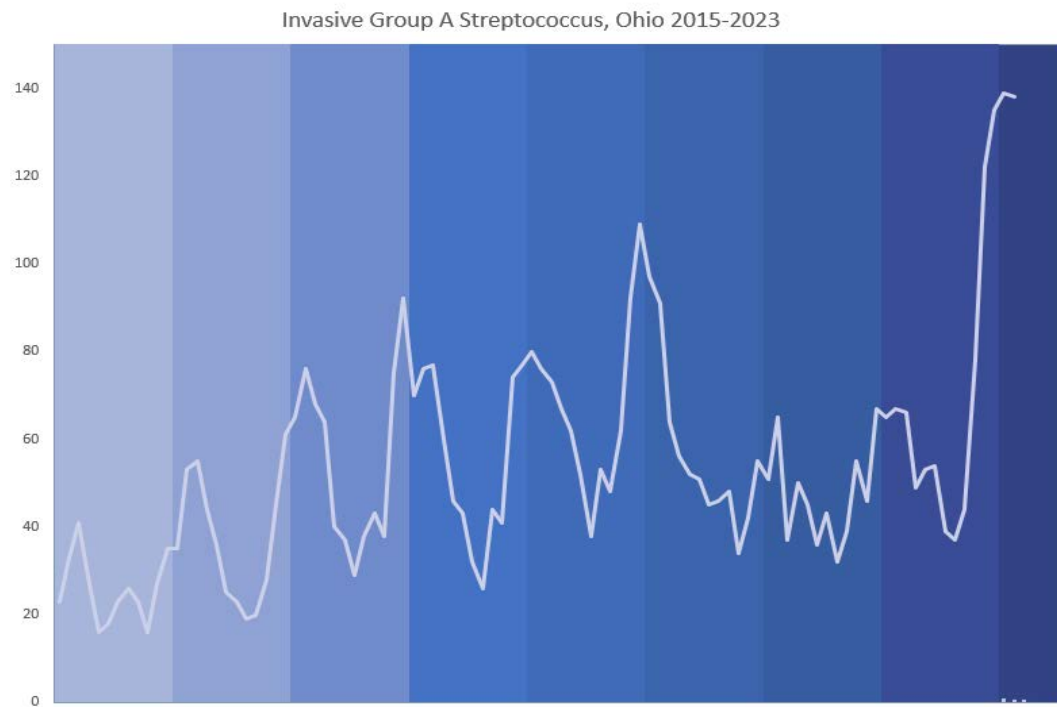

Figure 1: Trend in iGAS (invasive group A streptococcus) infections in Ohio from 2015- March 31, 2023. Each blue band is a year and shows count of cases over time. Graph courtesy of Katie Cibulskas, MGIS, ODH.
